

1. Village Pastor gets chicken house & 500 chickens.

and

→ **2.** Chickens are sold → all **costs** are covered and a **profit** is made

3. Purchases **1000 one day** old chickens

→ **4.** Chickens are sold with **300% net profit**

→ **5.** Pays **5% tax** back to central funds so that there are funds available to him should he require it in crisis. The tax remains levied against him forever.

→ **6.** Supplies from his profits a chicken house & 500 chickens to another village Pastor

→ **7.** The **second generation** Pastor from the profits of his **second crop** of chickens pay **5%** to the village Pastor who gave him the chicken farm & 500 chickens and another **5%** to the central fund.

→ The **5%** to the Pastor who set up the second generation farm (and continuous procedure each twelve months) is designed to encourage all the village Pastors to be mindful of the other villages and be fount giving to them.

It is reward for effort

It still remains a network, but this method pushes the profits further and quicker than the incubator.

Try drawing up the network with every farmer starting up a new farm every year for five years.

This method of chicken farms turns the village Pastor into a **RS\$millionaire in three years.**
